

Vulnerability Analysis Report

CrowdStrike

REPORTING PERIOD

July 2026

REPORT TYPE

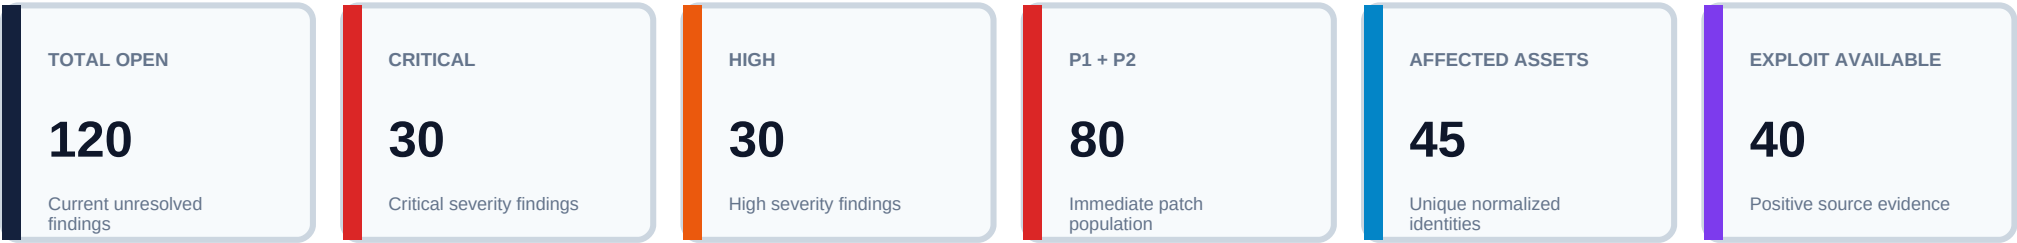

Executive dashboard

OPEN FINDINGS

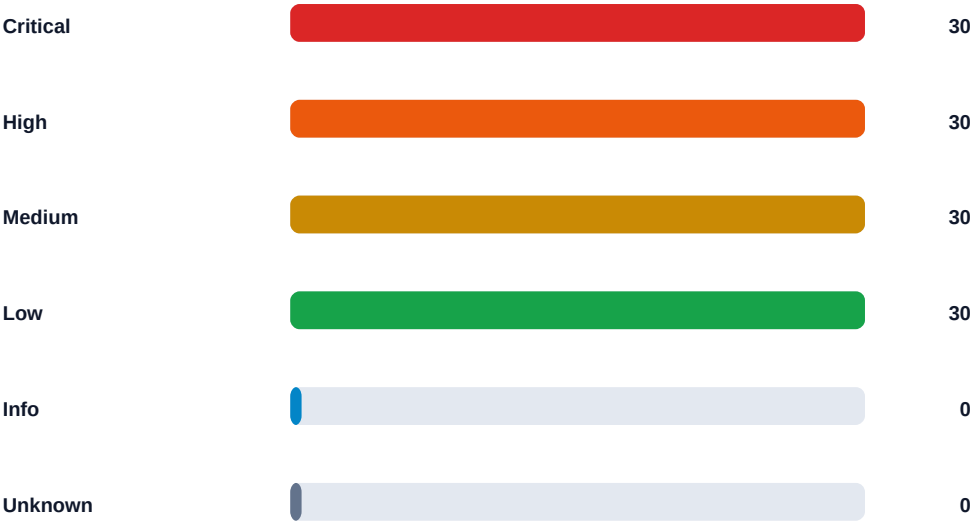

120

Contents

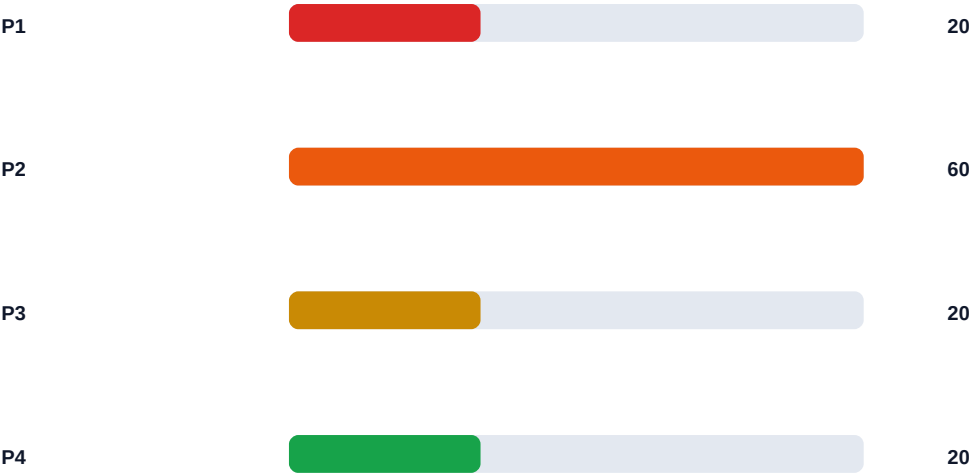

1. Executive summary
2. Discovery and remediation trend
3. Total open vulnerabilities
4. Patch priority distribution
5. Age and patch priority
6. Top affected assets and vulnerabilities
7. Definitions and calculation logic

Severity posture

Patch priority posture

Executive observations

- 80 of 120 open findings require P1 or P2 handling.
- 40 findings contain positive exploit-availability evidence from the selected source exports.
- 25 findings were no longer observed since June 2026.

Vulnerabilities discovered

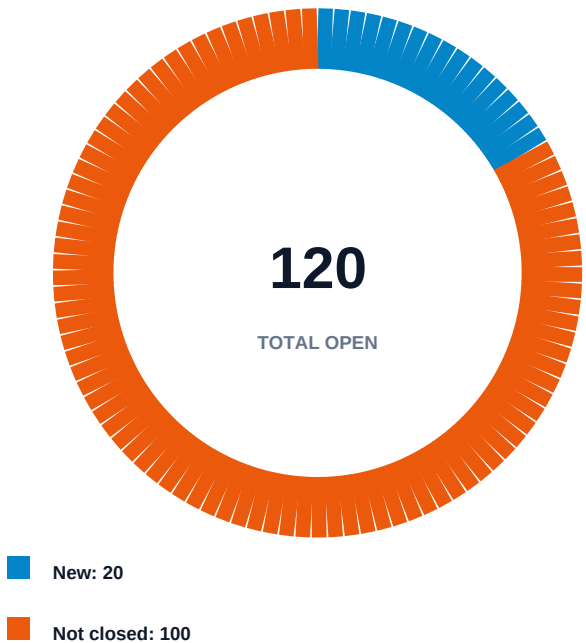

Vulnerabilities remediated

Calculation

- Discovered: findings whose First Discovered date falls in the reporting period.
- Remediated: findings present in the previous report and absent from the current report.
- A missing historical file is not treated as remediation evidence.

TOTAL OPEN

120

New + not closed

NEW

20

Since June 2026

NOT CLOSED

100

Persisting from prior report

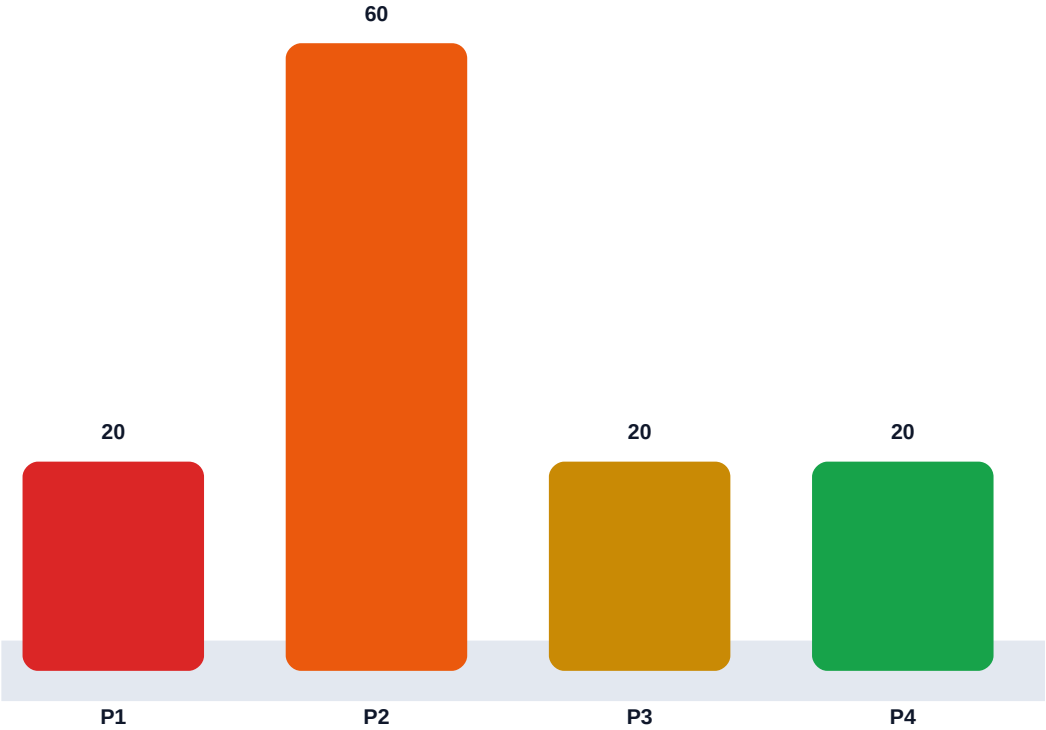

PATCHED

25

No longer observed

Reconciliation

- 125 previous open + 20 new - 120 current open = 25 patched.

Priority matrix

Severity	Exploit available	No exploit
Critical	P1	P2
High	P1	P2
Medium	P2	P3
Low	P2	P4

Priority interpretation

- P1 and P2 are included in Immediate Patch Needed.
- Exploit availability must be supported by a source field. OpenShift Fixable indicates remediation availability, not exploitability.
- Different vulnerabilities on the same asset remain separate findings.

Open Findings by Age and Patch Priority

Cumulative thresholds: >7, >30, >60, and >180 days

Priority	>7 days	>30 days	>60 days	>180 days
P1	20	16	12	2
P2	60	51	38	8
P3	20	16	12	2
P4	20	17	13	3

How to read this page

- Thresholds are cumulative. A finding older than 180 days is also counted in >60, >30, and >7 days.
- Age uses the scanner vulnerability-age field when supplied; otherwise it is calculated from First Discovered to the report date.
- Missing age evidence is not assigned to a threshold.

Top affected assets

Asset	Open	P1/P2	Critical
cs-asset-001.corp.example	3	3	1
cs-asset-002.corp.example	3	2	1
cs-asset-003.corp.example	3	2	1
cs-asset-004.corp.example	3	3	0
cs-asset-005.corp.example	3	1	1
cs-asset-021.corp.example	3	1	0
cs-asset-022.corp.example	3	3	1
cs-asset-023.corp.example	3	2	1
cs-asset-024.corp.example	3	2	1
cs-asset-025.corp.example	3	3	0

Top vulnerabilities

Vulnerability	Open	Assets	Priority
Apache Log4j remote code execution	15	15	P1
Cisco IOS XE web UI privilege escalation	15	15	P1
Google Chrome use-after-free vulnerability	15	15	P1
Windows Remote Desktop Licensing Service remote code e...	15	15	P1
Apache Tomcat AJP file read and inclusion	15	15	P2
Linux kernel netfilter use-after-free	15	15	P2
Microsoft Exchange privilege escalation	15	15	P2
OpenSSL X.400 address type confusion	15	15	P2

Measure	Definition
Total open	New findings plus findings still open from the previous comparable report.
New	Finding key is present in the current report but not the previous report.
Patched	Previous open + new - current open, reconciled against finding-key removal.
Finding identity	Asset identity + vulnerability identity + protocol + port/service. Different vulnerabilities on one asset are never deduplicated.
Exploit available	Positive evidence from the scanner exploit field. Empty, unavailable, unproven, or negative values are false.
P1-P4	Severity crossed with exploit availability using the approved priority matrix.
Age thresholds	Cumulative >7, >30, >60, and >180 day counts by patch priority.
OpenShift Fixable	Remediation availability only; it does not change exploit availability.
